

Why **TIMS MVP** is needed for every MBS study!

Main Benefits

Synchronized Video and Audio – Capture all pertinent information for MBSS with real-time synchronization of both audio and video. There is no fluoroscopy system in the world that can capture synchronized audio.

Automated Capture – You will never miss any runs when using TIMS MVP. TIMS MVP automatically records swallow studies (only when the fluoro pedal is pressed so you always record exactly the video you need) at the maximum resolution of your fluoroscope, with speeds up to 30 frames per second.

Reduced Study Size – Recording MBSS through your fluoroscope creates unnecessary large file sizes and they often limit the recording time. TIMS MVP compresses your study to 10% of its original size while maintaining high resolution video quality. The average MBSS when recorded through the fluoroscope is 4GB. That same study on TIMS MVP is only 400MB.

TIMS MVP Workflow, More Studies Per Day – With the TIMS workflow you can reduce the time spent in the fluoroscopy suite, allowing you to perform more studies per day. Each TIMS system includes one license of TIMS Review. This enables the Speech Therapist to review, edit, analyze, and diagnose in their office, freeing the fluoro suite for new studies immediately.

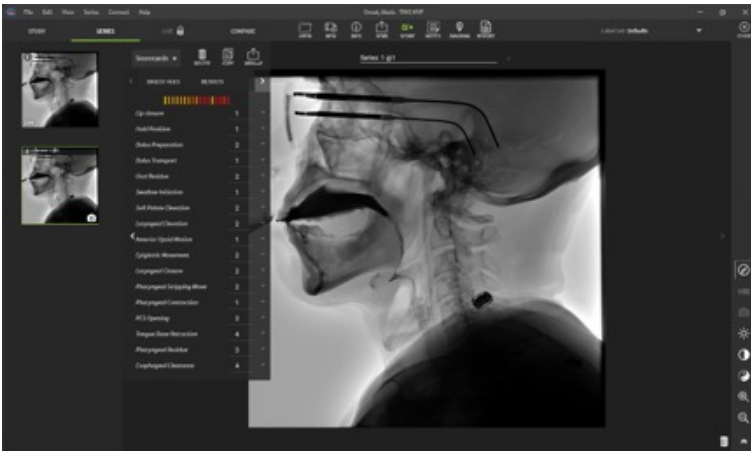

Label Sets – To make workflow processes easier, we have automatic label sets, built-in label sets, and the ability to create your own customized labels. Using automatic label sets can save on average 5 minutes

Additional Benefits

- Full Study Editing
- Send to PACS/VNA/EMR
- Side-by-side Study Comparison
- Standardized Scorecards
- Objective Measurements
- Telestrations & Annotations
- Snapshots, Subclips, & Composite Clips
- Export Videos & Images for Presentations
- TIMS Connect – Live Study Transmission for Collaboration & Training (yearly license, free for first year)

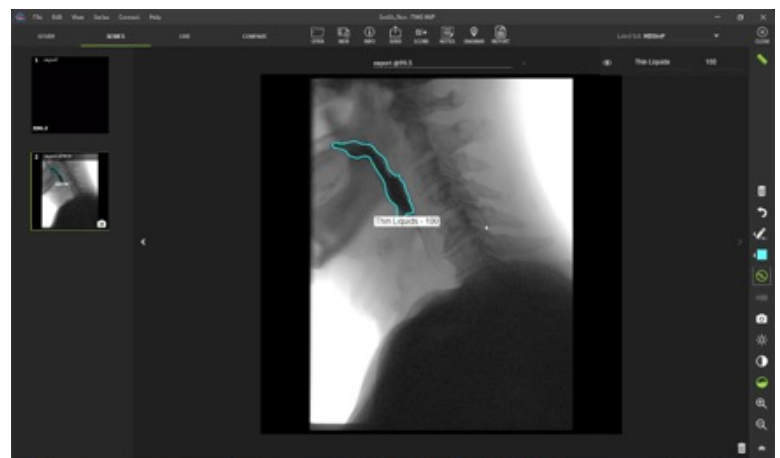

New Features

- Customized Reporting
- PatientView: Picture-In-Picture View of the Procedure Room (yearly license, free for first year)
- Scorecards
- Free-Hand Telestration Tool & Calibration
- Import Media Files
